

SHEARLING

CARE GUIDE

THERMA KÖTA™

CARING FOR YOUR SHEARLING

Whether you're the proud owner of a Therma Kōta shearling, or have yet to join our shearling society, we hope this guide will help educate you on the natural beauty of this special product. With proper care, this unique handmade piece will only get better with age. Don't worry, it's quite simple and we're here to help.

First off, it's important to understand, respect and appreciate irregularities and variations in the colours and textures of this sheepskin material. They are characteristic of its authenticity and should not be perceived as flaws. Shearling is a natural, biodegradable product with a gentle environmental footprint. Like snowflakes, no two shearlings are exactly alike.

Sheepskin is a natural lamb pelt that features leather or suede on one side and plush shearling wool on the flip side. Lightweight and luxuriously supple, sheepskin is one of nature's greatest sources of insulation. Its soft wool fibers are naturally thermostatic, wicking away moisture for year-round comfort and breathability.

OUR ESSENTIAL SHEARLING CARE RULES

When cared for properly, shearling is a long term investment in comfort and style.

WATER

- If it gets wet, lay the shearling flat to air-dry.
- Do not rub or brush sheepskin when it's wet.
- Keep away from high heat sources such as blow dryers and radiators.

CLEANING

- Never put in the washing machine.
- All Therma Kota Napalan shearling is pre-treated be stain and water resistant. To remove any dirt or markings that may occur, please see a reputable fur and leather cleaning specialist immediately.
- Do not use any silicone-based products on your shearling or ever apply any adhesives/ stickers to its surface.
- Do not wear dark-wash denim or other fabrics prone to dye transfer with your shearling.
- Therma Kota recommends having your shearling cleaned seasonally by a professional. If winter solvents and salt accumulate on the jacket, they can damage the material.

STORAGE

- Store in a cool, dry place.
- Avoid prolonged exposure to direct sunlight to prevent fading.
- Never store in unbreathable enclosures such as plastic bags.
- Give the jacket some breathing room in your closet so it is not cramped by other clothes and hangs freely.
- Always store on a solid coat hanger. Never drape it over a doorknob or other rounded or pointed forms (such as a coat rack) to prevent warping.

Therma Kota cannot take responsibility for any damage that occurs due to wear or application of treatment products, but is happy to advise and answer any questions about your shearling.
